

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	11 July 2026
Team ID	SWTID-2026-5277
Project Name	Food Ordering Behaviour and Consumer Trends
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution, derived from the food ordering behaviour dataset (order_id, city, cuisine, meal_type, order_value, delivery_fee, time_taken_to_order, rating_given, is_repeat_order, etc.) and the three usage scenarios (Business Analyst, Operations Manager, and Customer).

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Order Trend & Cuisine Analysis (Scenario 1 - Rahul Sharma, Business Analyst)	- Analyse order volume trends by cuisine, meal type and city - Visualise order value and delivery fee distribution across customer segments - Track demand changes across time periods (order_time, day_type) to identify evolving trends
FR-2	Delivery Performance & Operational Efficiency (Scenario 2 - Priya Mehta, Operations Manager)	- Analyse delivery time distribution (time_taken_to_order) across cities - Identify peak ordering hours and workload distribution to optimise resource allocation - Flag delays/inefficiencies and highlight opportunities to improve service consistency
FR-3	Customer Ordering Behaviour & Satisfaction Tracking (Scenario 3 - Neha Reddy, Customer)	- Track customer preferences for cuisine, meal type and restaurant type - Correlate order value, delivery fee, discount and delivery time with rating_given - Monitor is_repeat_order to measure customer loyalty and reorder likelihood
FR-4	Interactive Dashboard & Reporting	- Build interactive Tableau dashboards summarising key KPIs (top cities, high-demand cuisines, peak meal times, delivery time distribution) - Provide filters/slicers by city, cuisine, meal type, day type and order time - Enable drill-down from summary-level charts to order-level detail for deeper analysis

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Tableau dashboard should present order trends, cuisine preferences and delivery metrics through clear, intuitive visuals so that Business Analysts, Operations Managers and Customer Support teams can interpret insights without technical training.
NFR-2	Security	Customer order data (user_id, order value, location) must be stored and accessed securely, with access restricted to authorised team members only.
NFR-3	Reliability	The dashboard must consistently reflect accurate, up-to-date order and delivery data, ensuring the analysis of trends such as peak mealtimes and top cities remains dependable.
NFR-4	Performance	Dashboards should load and render visualisations (e.g. city-wise demand, delivery time distribution) quickly, even when processing large volumes of order records (50,000+ rows).
NFR-5	Availability	The solution should be accessible whenever stakeholders need to review order trends or delivery performance, with minimal downtime.
NFR-6	Scalability	The solution must be able to handle a growing volume of orders, cities and cuisines as the food ordering platform expands, without degradation in dashboard performance.
