

Brainstorm & Idea Prioritization

Team gathering & Problem Statement Selection

The team conducted a brainstorming session to understand the project objectives and evaluate all the problem statements. After evaluating each scenario, the team selected the most suitable problem statement based on the project goals and dataset.

Step-1

Selected Problem statement

PS-2 Priya Mehta(Operational Manager)

Focus :

- Delivery Performance
- Peak Orders Hours
- City Wise Demand
- Operational Efficiency

Why?

- Covers multiple business challenges
- Helps optimize delivery operations
- Easy to analyze using Tableau
- Generates meaningful business insights
- Matches the available data set.

The team reviewed all the problems statements and finalized PS-2 as it aligns best with the project goals and available dataset for meaningful analysis in Tableau.

Brainstorm

Step 2

How might we improve food delivery performance and customer satisfaction?

Person 1

Analyze peak order hours to optimize delivery staff allocation.

Identify weekdays and weekends with the highest order volume.

Study meal-time demand (Breakfast, Lunch, Dinner) to improve delivery planning.

Person 2

Identify high-demand cuisines to improve inventory planning.

Compare cuisine popularity across different cities.

Analyze customer preferences for different meal types.

Person 3

Analyze delivery delays and identify bottlenecks.

Measure average delivery time across different cities.

Identify factors affecting delivery efficiency.

Person 4

Compare city-wise demand for better resource allocation.

Analyze order distribution across different locations.

Identify top - performing cities based on total orders.

Person 5

Create an interactive Tableau dashboard for decision-making.

Build KPI cards for Total Orders, Revenue and Average Delivery Time.

Add filters for City, Cuisine and Meal Type to improve dashboard usability.

Grouping & Clustering of Brainstorming Ideas

The team organized similar brainstorming ideas into logical clusters to simplify analysis and identify the major areas of project.

Time & Demand Analysis

- Peak order hours
- Meal-time trends
- Weekday vs Weekend analysis
- Cuisine & meal preferences

Geo-Spatial Analysis

- City-wise demand
- Order distribution
- Top-performing cities
- Location-based cuisine trends

Efficiency & Dashboard

- Delivery delay ideas
- KPI cards
- Interactive filters
- Dashboard design

The team grouped all brainstorming ideas into three major categories : Time & Demand Analysis, Geo-Spatial Analysis, and Dashboard & Operational Efficiency. This helped identify the key focus area for dashboard development business analysis.
