

Project Planning Phase

Product Backlog, Sprint Planning, Stories & Story Points

Date	15 July 2026
Team ID	SWTID-2026-5277
Project Name	Food Ordering Behaviour and Consumer Trends
Team Leader	Rishika Bhati
Team Members	Reet Lakhera, Yogita Sain, Vinita Sharma, Chhavi Sharma
Team Size	5
Tool Used	Tableau (Business Intelligence Software)
Skills Required	Data Analysis, Data Preprocessing, Dashboard, Visualization

Project Overview

The food delivery industry is becoming increasingly competitive, with businesses facing challenges in understanding customer behaviour, optimizing delivery performance, and maximizing revenue. This project analyses food ordering data using Tableau to uncover meaningful patterns and trends across order value, delivery fee, cuisine, meal type, city, and delivery time. The insights support three key stakeholder scenarios described below, which shape the user stories in the product backlog.

Scenario 1: Rahul Sharma – Business Analyst

Rahul analyses order trends, cuisine preferences, and city-wise demand using Tableau dashboards. He identifies high-performing segments and customer behaviour patterns by studying metrics such as order value and meal type, and tracks changes in demand across time periods to support data-driven business decisions.

Scenario 2: Priya Mehta – Operations Manager

Priya focuses on improving delivery performance and operational efficiency. She analyses delivery time distribution and order volumes across cities to identify delays and inefficiencies, monitors peak hours and workload distribution, and works to optimize resource allocation for faster, more consistent deliveries.

Scenario 3: Neha Reddy – Customer

Neha, a regular customer, values quick delivery, reasonable pricing, and a variety of cuisine options, typically ordering during peak meal times such as lunch and dinner. Her satisfaction and loyalty depend on timely delivery and overall service experience, reflecting key customer trends that drive business success.

Product Backlog, Sprint Schedule & Estimation

Story points follow the Fibonacci scale: 1 – Very Easy, 2 – Normal, 3 – Moderate, 5 – Difficult.

Sprint	Epic	User Story No.	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Data Collection	USN-1	As the Business Analyst (Rahul Sharma), I can gather food ordering data (order value, delivery fee, cuisine, meal type, city, delivery time) so that trends can be analysed.	2	High	Rishika Bhati
Sprint-1		USN-2	As a team, I can load the collected food ordering dataset into Tableau for analysis.	1	High	Reet Lakhera
Sprint-1	Data Preparation	USN-3	As a team, I can handle missing values in the dataset so that the analysis is accurate.	3	High	Yogita Sain
Sprint-1		USN-4	As a team, I can create derived fields (e.g. delivery time buckets, order time slots) to support deeper analysis.	3	Medium	Vinita Sharma
Sprint-1		USN-5	As a team, I can handle inconsistencies in fields such as city and cuisine names for clean reporting.	3	Medium	Chhavi Sharma
Sprint-2	Data Visualization	USN-6	As the Business Analyst (Rahul Sharma), I can view a bar chart of cuisine-wise order volume to identify high-demand cuisines.	2	High	Rishika Bhati
Sprint-2		USN-7	As the Business Analyst (Rahul Sharma), I can view a pie chart of meal type distribution to understand ordering patterns.	2	High	Reet Lakhera
Sprint-2		USN-8	As the Operations Manager (Priya Mehta), I can view a line chart of delivery time trends to identify delays and inefficiencies.	2	High	Yogita Sain
Sprint-2		USN-9	As the Operations Manager (Priya Mehta), I can view a map of city-wise order demand to plan resource allocation.	4	Medium	Vinita Sharma
Sprint-2	Dashboard	USN-10	As a stakeholder (including customers like Neha Reddy), I can view an interactive dashboard combining order trends, delivery performance, and customer satisfaction metrics.	5	High	Chhavi Sharma
Sprint-2	Story	USN-11	As a team, I can develop a data story that presents key insights and business recommendations from the analysis.	5	Medium	Rishika Bhati

Total Story Points in Sprint 1 = 2 + 1 + 3 + 3 + 3 = **12**

Total Story Points in Sprint 2 = 2 + 2 + 2 + 4 + 5 + 5 = **20**

Project Tracker, Velocity & Burndown Chart

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed	Sprint Release Date (Actual)
Sprint-1	12	6 Days	15 Jul 2026	20 Jul 2026	12	20 Jul 2026
Sprint-2	20	6 Days	21 Jul 2026	26 Jul 2026	20	26 Jul 2026

Velocity

Velocity = Total Story Points Completed / Number of Sprints

Total Story Points = 12 + 20 = 32

Number of Sprints = 2

Velocity = $32 / 2 = 16$ Story Points per Sprint

Burndown Chart

A burndown chart is a graphical representation of work remaining versus time, commonly used in agile methodologies such as Scrum. The chart below plots remaining story points (starting at 32) against the sprint timeline (15 Jul – 26 Jul 2026), showing the planned burn-down of 12 points in Sprint-1 and the remaining 20 points in Sprint-2, tracked against actual completion as recorded in the tracker above.
